NetDirector offers automated Person Status options

Tampa, FL — June 25, 2012 – NetDirector, provider of a leading Cloud-based data exchange, today announced the availability of their Person Status Suite of integration services. Person Status options include: Military Search, Social Security Number (SSN) Finder, PACER Search, Death Search and Accurint (by LexisNexis) Person Verification. NetDirector' Person Status automation interfaces are designed for use by mortgage loan servicers, foreclosure attorneys, trustees, process servers, and other industry vendors providing a complete picture of a borrowers status to meet compliance obligations.

Military Search provides compliance with the Service members Civil Relief Act (SCRA). Customers can send SCRA requests with a SSN or without if using our SSN Finder. This round trip transaction allows NetDirector customers to send requests to the Department of Defense and within seconds receive their response with a certificate of the actual search. The response transaction includes active military status, start/stop date, branch of service, comments and certificate.

SSN Finder provides an added layer of automation requiring only a valid name, address and file number. If multiple SSN's are found for a person, and no match is made with the last 4 of the SSN in the request (if supplied) or the last 4 were not submitted with the request - the response will include additional info (i.e.: AKA's, DOB, Phone Numbers, etc.) for each SSN found. SSN Finder can be used with Military Search, PACER Search or Standalone.

Bankruptcy PACER integration suite currently provides multiple interface capabilities including: automated document/docket retrieval and prior case searches. The round trip data interface allows NetDirector subscribers to send requests to the PACER Case Locator site to search for current and prior bankruptcy filings. The automated response can include information on cases filed in other districts/divisions and links to current and prior case dockets and documents. More importantly, returned searches and dockets have live hyperlinks within the PDF documents - saving time by eliminating the need to re-key search information and providing a direct link to cases and docket information for future retrievals.

The **Death Search** service contains a request and response. This round trip transaction allows NetDirector customers to send requests and in seconds receive a response with the detailed information on the search. The response transaction includes the name, date of death, date of birth, and data on how the death information was obtained.

Accurint Person Search service allows customers to request and retrieve Personal Data Verification without leaving their case management system (CMS). NetDirector provides a real-time search and retrieval method with verification response. This automated process significantly reduces the need for re-keying of data into the Accurint web-site for requests and eliminates double keying data into the customer's CMS. Customer is required to have an active Accurint account.

Person Status Highlights:

- Multiple connection options (i.e.: Web Service, FTP, etc.) and formats: including real-time xml or batch
- Response Times – virtually real-time (less than a minute) for individual requests
- High Capacity – can handle large volumes of Person Searches per day/month
- High-end Security “one-level above on-line banking” for sensitive personal information
- Subscription Pricing Model varies based on transaction types and consumption

“Our Person Status automation services allow our customers to reduce headcount by eliminating numerous manual tasks and redundant system updates”, said Harry Beisswenger, CEO at NetDirector. “As more regulations require valid personal information – these types of real-time integrated searches will reduce compliance exposure.”

About NetDirector

NetDirector provides a Cloud- based data exchange to improve process efficiency and standards compliance. NetDirector partners with its subscribers to provide a solution that allows them to move data and documents securely with a myriad of industry trading partners, including, a national attorney/trustee network, mortgage loan servicers, title providers, process servers, publications and many more.
