

## Description

The Death Search transaction provides prompt return data on death search records from the SSDI (Social Security Death Index). NetDirector's Death Search interface saves you time and streamlines your processes by allowing you to check the death records without leaving your case management systems (CMS), thereby alleviating data keying errors and reducing timelines.

---

## Death Search Interface

The Death Search interface contains a request and response. This round trip transaction allows NetDirector subscribers to send requests to NetDirector and in less than minutes receive a response with the detailed information on the search. The response transaction includes the name, date of death, date of birth and data on how the death information was obtained.

---

## Key Benefits:

- ◆ Lower cost than direct connection to SSDI web service
- ◆ Only requires your file number and the full SSN
- ◆ Reduces data mishaps and search
- ◆ Improves timeline management and servicer scorecard
- ◆ Increases resource capacity
- ◆ Transaction reporting available

---

## Pricing

The Death Search Subscription Pricing Model is based on a per round trip transaction and includes: a request and response. The cost is \$.05 for the search and \$1.00 if the death record is found.

---
