Preservation Automation

Description

NetDirector's **Preservation Automation** transaction set provides order, results, and photo delivery automation between national and regional field service platforms. Orders are received into the supplier system and upon completion by the field rep, the results are transmitted to the national client system via a web service connection, along with the required set of photos. This solution is delivered as a cloud-based service which requires no hardware purchases, software installations, network setup, or ongoing system upgrades and patches from the customer's perspectives. Multiple national field service client systems are supportable. This program represents the next level of field service automation tools.

Preservation Automation Process Flow

Order/Request

Order/Request

XML Data File

NetDirector

National Field Service Platform

Images/Documents

Images/Documents

Regional Field Service Platform

Key Benefits:

♦ Reduced Labor – Using this interface reduces manual order processing and virtually eliminates the back-office bloat traditionally associated with regional field service operations

♦ Accuracy/Efficiency – Reduces keystroke errors and improves client scorecards by reducing timelines and replacing manual results processing with automated tasks

♦ Sustainability – Automating the delivery of order results and images restores the opportunity to return your preservation operations to a profitable enterprise

Pricing

♦ Standard Document & Transaction Pricing—Tiered monthly pricing by volume levels
