

Description

Transactions can have our rules engine, **NetAlert**, applied to look for certain message types and then further interrogate the contents of that message for certain values with corresponding actions.

Examples of how NetAlert can be used:

- ◆ Follow-ups (keywords)
- ◆ Critical Results (keywords)
- ◆ Out of range values (thresholds)
- ◆ Missed SLAs (subtraction of fields with thresholds)

Notification can occur via any of our traditional HealthData methods: e-mail, HL7, Web Services and more. Support for SMS is currently under investigation.

NetAlert Benefits

- ◆ Save time by automating manual business processes
- ◆ Reduce manual errors
- ◆ Never miss an actionable item with alerts in place

Pricing

- ◆ **NetAlert** cloud-based pricing is based on a per rule/alert model.
